SOLAR STIK™ plays critical role during ARRL Field Day

St. Augustine, FL, June 28 2008:

The Solar Stik™ System was employed by multiple Amateur Radio Clubs across the state of Florida for ARRL Field Day 2008. Many of the local radio clubs are directly involved with disaster relief and emergency response during times of crisis.

Use of the Solar Stik™ Systems by State Emergency Response Teams (SERT) is on the increase. Many Emergency Management Offices in the state have already purchased the Solar Stik™ System to supply power during times of crisis. Many of the radio clubs took the opportunity to learn how to use a solar generator to power various types of emergency equipment including communications, computers, and more, should conditions warrant.

Since a solar generator requires no fuel, it does not require any logistics to support its operation in the field. This is a critical feature when traditional power is limited due to fuel resources or damaged infrastructure.

Event photos and additional information about the Solar Stik™ System and the events can be found online at www.solarstik.com
