SOLAR STIK™ debuts at major national sporting events

St. Augustine, FL, July 5 2008:

The Solar Stik™ System was employed at major sporting events during the Independence Day Weekend.

The Solar Stik™ System made its debut into the sports-world with appearances at the LPGA P&G Championship in NW Arkansas and the Camping World Grand Prix at Watkins Glen International Speedway in NY.

The Systems were tasked with providing power for various applications including hospitality tents and electronic sport simulators. Additional systems were made available to power several vendor booths.

The deployment of Solar Stik™ Systems gave the general public a chance to see the latest in portable power technology, **a solar generator**, in a real world application.

Due to rising fuel prices in recent months, many people are seeking alternatives to traditional power. Several took the opportunity to learn about solar technology and how it can benefit them at home or on the road. Solar Stik™ representatives were on hand to demonstrate the operative characteristics of the system as well as to answer general questions regarding solar energy.

Event photos and additional information about the Solar Stik™ System and the events can be found online at www.solarstik.com
