

SOLAR STIK®

# Solar Stik Mast Height Adapter Kit

Item # 17-0000004

## Overview

The Mast Height Adapter Kit can be added to the base of a Marine 100 System mast to extend the overall mast height by as much as 24 inches. The Mast Height Adapter Kit is a mast height extension option to be used when more than 6 inches of additional mast height is necessary (clearance for a boom, bimini top, etc). For extensions of 6 inches or less, use Mast Height Adjuster Bushings.

The Mast Height Adapter Kit can be used with deck- or transom-mounted systems. The maximum height of the mast will be 111 inches when the Mast Height Adapter Kit is installed. It can then be cut to the minimum length necessary for clearance and to allow reasonable manual operation of the Marine 100 System. It is recommended that the Mast Height Adapter Kit be welded in place for maximum strength.

## Construction

24-inch Mast extension

T5052 brushed anodized aluminum
